thoroughly covers several domains of modern clinical trial design: classical, group sequential, adaptive, and Bayesian methods that are applicable to and widely used in various phases of pharmaceutical development. Written for biostatisticians, pharmacometricians, clinical developers, and statistical programmers involved in the design, analysis, and interpretation of clinical trials, as well as students in graduate and postgraduate programs in statistics or biostatistics, the book touches on a wide variety of topics, including dose-response and dose-escalation designs; sequential methods to stop trials early for overwhelming efficacy, safety, or futility; Bayesian designs that incorporate historical data; adaptive sample size re-estimation; adaptive randomization to allocate subjects to more effective

treatments; and population enrichment designs. Methods are illustrated using clinical trials from diverse therapeutic areas, including dermatology, endocrinology, infectious disease, neurology, oncology, and rheumatology. Individual chapters are authored by renowned contributors, experts, and key opinion leaders from the pharmaceutical/medical device industry or academia. Numerous real-world examples and sample SAS code enable users to readily apply novel clinical trial design and analysis methodologies in practice.

examination will allow an accurate diagnosis of the site of malfunction. The book emphasizes the management of common yet problematical symptoms such as headache and facial pain. It next comprehensively discusses the principal diseases and syndromes in neurology. Common illnesses such as stroke, dementia, and multiple sclerosis are given in-depth coverage, and recent advances in scientific medicine that have increased our understanding of the epidemiology and management of such illnesses are stressed. Finally there is a discussion of rehabilitation and the management of chronic disease and handicap. This relevant and accessible text will be useful to practicing physicians and neurologists, and medical students.

The most critical and influential relationship affecting one's growth as a mental health professional is the relationship between the clinician and the supervisor. Good supervisors breed good therapists. This book goes beyond facts and figures to provide an innovative perspective on the supervision process. Through contributions by seven supervisees and the supervisor they all shared, readers are offered a rare glimpse into what takes place during the supervision hour. This book not only offers insight into the elements integral to effective supervision, but also teaches about the supervisory relationship. With contributors from various disciplines, theoretical orientations, and cultures, it shows how the supervisee and supervisor are able to navigate these differences while still gaining the most from

supervision. Topics that are covered include cultural competence in multicultural supervision and remote supervision when it is conducted between clinicians in different countries, as well as an original study by the authors on the experiences of supervisees during the global Covid-19 pandemic and the transition to remote supervision. For mental health professionals who are training to be supervisors or experienced supervisors looking to improve their skills, this book will serve as an invaluable resource for professional development.

achievements of modern medicine. The aim of this volume, written by world-renowned scientists, is to provide the best available evidence on the pathogenesis, clinical features and therapeutic approach of cachexia, and to facilitate the understanding of the complex yet unequivocal clinical role of this syndrome, that truly represents a disease, or, more likely, a disease within other different diseases.

This book covers recent advances in the neural technology that produces enhancements for brain function. It addresses a broad range of neural phenomena occurring in the brain circuits for perception, cognition, emotion and action,

representing the building blocks of the behavior and mind. Augmentation of brain function is achieved using brain implants for recordings, stimulation and drug delivery. Alternative methods include employing brain-machine interfaces, as well as noninvasive activation of certain brain areas. Existing methods of brain augmentation are evaluated, and new approaches are introduced. Brain circuitry and neuronal mechanisms that are candidates for augmentation are discussed. This volume provides novel insights into brain disorders, and new devices for brain repair. Information in this book is relevant to researchers in the field of neuroscience, engineering, and clinical practice. Philosophical and ethical implications of brain augmentation are also addressed. This book discusses Prosthetic Joint Infection (PJI), which remains one of the most common problems necessitating revision arthroplasty. It pursues a multidisciplinary approach, bringing together opinions from the leading experts in the field. The book identifies the potential causes of these infections, provides sound diagnostic criteria guidelines, and explains how these prosthetic infections are managed from orthopedic surgery, clinical and diagnostic perspectives. PJI can lead to multiple revision surgeries and

significant patient morbidity. Periprosthetic infection rates remain around 1–2% after primary total hip and knee arthroplasty and account for approximately 7–12% of all revision cases. Orthopedic hardware infections are much-feared and costly complications that can occur when these devices are implemented both in traumatic cases as well as in joint replacement surgery. Because these infections can lead to higher morbidity, it is important to understand their pathophysiology and the principles behind their diagnosis and initial treatment. The pathogenesis of these kinds of infections is intimately connected to the biofilm-producing trait characteristic of many microorganisms, which can have a critical effect on the likely success of treatments. The book offers a unique guide for all scientists working in
