In the year ten billion A.D., Diaspar is the last city on Earth. Ageless and unchanging, the inhabitants see no reason to be curious about the outside world. But one child, Alvin - only seventeen and the last person to be born in Diaspar - finds that he is increasingly drawn to what lies outside the city walls. Even though he knows the Invaders, who devastated the world, may still be out there... Later rewritten, expanded and republished as *The City and the Stars*, this early novella by one of the greats of science fiction remains a powerful and evocative depiction of the future of humanity...

Alvin of Loronei escapes Diaspar, the last living city on Earth, to seek his destiny by revitalizing humankind and by salvaging Earth from stagnation

The technologically groundbreaking novel of space exploration from the only science fiction author nominated for a Nobel Peace Prize. Roy Malcolm has always been fascinated by space travel. And when he wins a voyage to the Inner Space Station as a game show prize, he's sure it's the trip of a lifetime. Before long, Roy is taken in by the young crew-and shares their adventures and lives. One of Arthur C. Clarke's earliest novels, *Islands in the Sky* is particularly noteworthy for its description of geostationary communications satellites. While this technology was nonexistent during the writing of this book, it later became commonplace-and Clarke is credited with the first practical descriptions of such technology. This book is compelling not just as a fictional tale, but as an example of the prescient power of Clarke's vision. "[Clarke is] one of the truly prophetic figures of the space age." -The New Yorker

From Arthur C. Clarke, the brilliant mind that brought us *2001: A Space Odyssey*, and Stephen Baxter, one of the most cogent SF writers of his generation, comes a novel of a day, not so far in the future, when the barriers of time and distance have suddenly turned to glass. When a brilliant, driven industrialist harnesses cutting-edge physics to enable people everywhere, at trivial cost, to see one another at all times-around every corner, through every wall-the result is the sudden and complete abolition of human privacy, forever. Then the same technology proves able to look backward in time as well. *The Light of Other Days* is a story that will change your view of what it is to be human. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Six decades of fascinating stories from the legendary "colossus of science fiction" and creator of *2001: A Space Odyssey* gathered in one compendium (*The New Yorker*). Arthur C. Clarke, along with H. G. Wells, Isaac Asimov, and Robert A. Heinlein, was a definitive voice in twentieth century science fiction. A prophetic thinker, undersea explorer, and "one of the true geniuses of our time," Clarke not only won the highest science fiction honors, the Nebula and Hugo Awards, but also received nominations for an Academy Award and the Nobel Peace Prize, and was knighted for his services to literature (Ray Bradbury). Now, more than one hundred works of the sci-fi master's short fiction are available in the "single-author collection of the decade" (Booklist, starred review). This definitive edition includes early work such as "Rescue Party" and "The Lion of Comarre," classics like "The Nine Billion Names of God" and "The Sentinel" (which was the kernel of the later novel and movie, *2001: A Space Odyssey*), and later works including "A Meeting with Medusa" and "The Hammer of God." Encapsulating one of the great science fiction careers of all time, this immense volume "displays the author's fertile imagination and irrepressible enthusiasm for both good storytelling and impeccable science" (*Library Journal*). "One of the most astounding imaginations ever encountered in print." -*The New York Times* "As his *Collected Stories* helps to demonstrate, there has been no popular writer since the days of C S Lewis and Charles Williams whose disposition is more nakedly apocalyptic, who takes greater pleasure in cradling eternity in the palm of his hand." -*The Guardian*

Earth refugees threaten a peaceful space settlement in this influential novel from the Golden Age science fiction author of *2001: A Space Odyssey*. More than two thousand years in the future, a small human colony thrives on the ocean paradise of Thalassa-sent there centuries ago to continue the human race before Earth's destruction. Thalassa's resources are vast-and the human colony has lived a bucolic life there. But their existence is threatened when the spaceship *Magellan* arrives on their world-carrying one million refugees from Earth, fleeing the dying planet. Reputed to be Arthur C. Clarke's favorite novel, *The Songs of Distant Earth* addresses several fascinating scientific questions unresolved in their time-including the question of why so few neutrinos from the sun have been measured on Earth. In addition, Clarke presents an inventive depiction of the use of vacuum energy to power spacecraft-and the technical logistics of space travel near the speed of light. "Clarke's simple, musical style never falters in this sobering yet far from bleak commentary on humanity's longing for the stars. Highly recommended." -*Library Journal*

A story of the future, about a specially designed air vessel that sinks with its human cargo into a sea of dust in one of the craters of the moon.

This "marvelous lunar espionage thriller" by the science fiction grandmaster and author of *2001: A Space Odyssey* "packs plenty of punch" (SFReviews.net). Two hundred years after landing on the Moon, mankind has moved further out into the solar system. With permanent settlements now established on the Moon, Venus, and Mars, the inhabitants of these colonies have formed a political alliance called the Federation. On the Moon, a government agent from Earth is tracking a suspected spy at a prominent observatory. His mission is complicated by the rise in tensions between Earth's government and the Federation over access to rare heavy metals. As the agent finds himself locked in a battle for life and death on the eerie, lunar landscape, the larger conflict explodes across space, leaving mankind's future in doubt. First published in 1955, this suspense-filled space opera by the Science Fiction and Fantasy Hall of Fame inductee was a significant forerunner of television hits like *Star Trek* and *The Expanse*.

Analyzes Clarke's stories and novels, discusses his major themes, and looks at how Clarke uses character, plot, and scientific concepts.
