Solutions are always
homogeneous. Explanation:

Or homogeneous because in solution the ratio of solute and solvent remain the same throughout the solution. Both solute and solvent are chemically combined and form a new substance. In solution the particles of solute can not be seen through naked eye.

Is a solution a homogeneous or heterogeneous mixture
Chemical solutions are usually homogeneous mixtures. The exception would be solutions that contain another phase of matter.

Or Homogeneous

For example, you can make a homogeneous solution of sugar and water, but if there are crystals in the solution, it becomes a heterogeneous mixture. Many common chemicals are homogeneous mixtures.

Download File PDF Are Solutions Heterogeneous

Homogeneous mixture is a type of mixture with a uniform composition. This means that the substances cannot be distinguished easily from one another. The two components are well mixed that we can not see the individual components separating out.

Eq. 20-15 is said to be a homogeneous linear first-order ODE; otherwise Eq. 20-15 is a heterogeneous linear first-order ODE. The reason that the homogeneous equation is linear is because solutions can be superimposed--that is, if y_1 and y_2 are solutions to Eq. 20-15, then $y_1 + y_2$ is also
