What can the human brain and its
relationship to the internet tell us about

our society, our technologies, and our
businesses? A lot, as it turns out. The
internet today is a virtual replica of the
brain, and the networks that leverage it
grow and collapse in ways that are
easily predictable if you understand
the brain and other biological
networks. We're living in the midst of a

networking revolution. All of the major
technology innovations of the 21st
century — social networking, cloud
computing, search engines, and
crowdsourcing, to name a few —
leverage the internet and are thus
bound by the rules of networks. We've
seen the exponential growth of these

technologies, and they've led to a
more efficient and tightly connected
world. But what many people don't
realize is that all networks eventually
reach a breakpoint and collapse. This
happens in the brain, it happens in
nature, it happened to MySpace, and it
will happen to Facebook and Google.
