Given a -10 º C ambient temperature and an initial water temperature of 7 º C Armacell has calculated (in accordance with BS EN ISO 12241) the following freezing times of pipework when Armaflex is used. Local water supply regulations recommend providing at least 12 hours protection.

A necessary purchase for level 1 and 2 undergraduates studying building/ construction materials modules, Materials for Architects and Builders provides an introduction to the broad range of materials used within the construction industry and contains information pertaining to their manufacture, key physical properties, specification and uses. Construction Materials is a core module on all undergraduate and diploma construction-related courses and this established textbook is illustrated in colour throughout with many photographs and diagrams to help students understand the key principles. This new edition has been completely revised and updated to include the latest developments in materials, appropriate technologies and relevant legislation. The current concern for the ecological effects of building construction and lifetime use are reflected in the emphasis given to sustainability and recycling. An additional chapter on sustainability and governmental carbon targets reinforces this issue.

'Materials for Architects and Builders' covers the broad range of key materials used within the construction industry and is a descriptive introduction to the manufacture, key physical properties, specification and uses of the major building materials. This new edition has been completely revised and updated to include the latest developments in materials technology, in particular the need to adapt for the ecological impact of different materials. The book is illustrated in colour throughout with many photographs and diagrams showing materials and building components both individually and in use. Each chapter lists the up-to-date British and European Standards, revised Building Regulations together with related Building Research Establishment publications and suggested further reading.
â € ¢ Essential reading for students of building, architecture and construction â € ¢ Extensive

coverage all types of building materials â € ¢ Updated to include latest national and international standards and regulations

This 'Non-Domestic Heating, Cooling and Ventilation Compliance Guide' provides guidance on the means of complying with the requirements of Part L for conventional space heating systems, hot water systems, cooling and ventilation systems in non-domestic buildings. Its sets out the minimum provisions for: efficiency of the plant that generates heat, hot water or cooling; controls to ensure that the system is not generating heat, hot water or cooling unnecessarily or excessively;other factors affecting the safety or energy efficiency of the system; insulation of pipes and ducts serving space heating, hot water and cooling systems; and acceptable specific fan power ratings for fans serving air distribution systems. The guide also provides a set of additional measures which may improve the efficiency of the plant: these are non-prescriptive may be either required or optional depending on the type of plant.

First Published in 2008. Routledge is an imprint of Taylor & Francis, an informa company.

For over 70 years, Faber & Kell's has been the definitive reference text in its field. It provides an understanding of the principles of heating and air-conditioning of buildings in a concise manner, illustrating practical information with simple, easy-to-use diagrams, now in full-colour. This new-look 11th edition has been re-organised for ease of use and includes fully updated chapters on sustainability and renewable energy sources, as well as information on the new Building Regulations Parts F and L. As well as extensive updates to regulations and codes, it now includes an introduction that explains the role of the building services engineer in the construction process. Its coverage of design calculations, advice on using the latest technologies, building management systems, operation and maintenance makes this an essential reference for all building services professionals.

This guide is referred to in the 2013 edition of Approved Document L1A and the 2010 edition of Approved Document L1B (as amended in 2013) for dwellings as a source of guidance on complying with Building Regulations requirements for space heating and hot water systems, mechanical ventilation, comfort cooling, fixed internal and external lighting and renewable energy systems.
