Wow. I hate to hear that. It sounds to me like your engine has a problem drinking oil. To my knowledge, there is not a known piston ring problem on C9 engines. But that doesn't mean that your engine doesn't have one. For truck engines, Cat warranty makes us complete an Oil Consumption report. I would ask Mustang if that can be done for you.

Caterpillar introduced ACERT Technology to meet EPA '04 regulations for on-highway trucks. Earlier, Caterpillar machine engines with ACERT Technology began field-testing across the United States, Canada and Europe. Now there are more than 350 such machines in the field. Combined, they have worked over 520,000 hours.

The critical parts of a heavy duty engine are theoretically designed for infinite life without mechanical fatigue failure. Yet the life of an engine is in reality determined by wear of the critical parts. Even if an

engine is designed and built to have normal wear life, abnormal wear takes place either due to special working conditions or increased loading.

Understanding abnormal and normal wear enables the engineer to control the external conditions leading to premature wear, or to design the critical parts that have longer wear life and hence lower costs. The literature on wear phenomenon related to engines is scattered in numerous periodicals and books. For the first time, Lakshminarayanan and Nayak bring the tribological aspects of different critical engine components together in one volume, covering key components like the liner, piston, rings, valve, valve train and bearings, with methods to identify and quantify wear. The first book to combine solutions to critical component wear in one volume Presents real world case studies with suitable mathematical models
