IXL - Compound interest: word problems (Algebra 2 practice)
Solution. When interest is compounded annually, total amount A after t years is given by: $A = P (1 + r)^t$, where P is the initial amount (principal), r is the rate and t is time in years. 1 year: $A = 2000 (1 + 0.03)^1 = \2060 . 2 years: $A = 2000 (1 + 0.03)^2 = \2121.80 . 3 years: $A = 2000 (1 + 0.03)^3 = \2185.45 .

Compound interest formula: $A = P(1 + r)^t$ where A represents the amount of money in the account at the end of the time period, P is the principal, r is the annual interest rate, and t is the time in years.

Lesson Plan -- Simple and Compound Interest

Compound Interest Formula: Amount = Principal * [1 + Rate of Interest/100] Time period.

Abbreviated as Amount = $P * [1 + R/100]^t$, when compounded annually.

Sometimes, the interest is also calculated half-yearly or quarterly.

When compounded semi-annually or half-yearly, Amount = $P [1 + (R/2)/100]^{2t}$.
