For instance a file size might be written as 3,456 X 2,304. That means there are 3,456 total pixels in the combined rows of pixels in the image from left to right, and 2,304 total pixels in the combined columns of pixels from top to bottom. To find the total number of pixels in an image, just multiply the number of pixels in the width of the image by the number of pixels in the height of the image. (3,456 X 2,304=7,962,624) Usually the total amount of pixels is rounded up or down to the ...

4K or 2160p = 3840 x 2160 - is commonly known as 4K, UHD or Ultra HD resolution. It is a huge display resolution, and it is found on premium TVs and computer monitors. 2160p is called 4K because the width is close to 4000 pixels. In other words, it offers four times the pixels of 1080p FHD or "Full HD."

So, Megapixels then become a kind of unit of measuring resolution in digital images. Resolution is determined by the size of pixels present in the image, and the more the pixels, the smaller they are. However, naturally, this has to take the size of the area in question as well. Plus, there are other considerations as well, such as the image ...
