In this age of global economic crises, the need to renew our commitment to social issues becomes even more urgent. Reduction in public and private spending on social programmes throws up further challenges for the sustenance of development efforts. The book advocates countering this trend through 'global social entrepreneurship' and the use of innovative, inexpensive and locally customized solutions. Using in-depth and contemporary case studies, the book

demonstrates how to define, measure and achieve socially and environmentally sustainable growth. The book inspires social entrepreneurs to build new models of sustainable growth, to scale existing solutions and to create new public-private partnerships.

This Business marketing text is unique in its emphasis on the complexity of the buying process, strategic relationships between business buyers and sellers, and their mutual dependence. The additions and changes shows, in a realistic way, the emerging trends in business marketing practices. In particular, the following new features have been included in the third edition. This book focuses on the needs and interests of an Indian reader. Its emphasis is on global thinking, but its plan is to act locally. The organisation of the book is based on the current marketing thinking and new ideas to meet the new challenges.

This book provides a set of integrated frameworks--capital, systems, and objects--that transcend managerial or technology hype by focusing on the long-term fundamentals that sustain organizational success, and it contains cases from South East Asia to elaborate this concept. Many organizations are currently addressing two important transformational issues: ecological sustainability and digitization. Sustainability is a goal, an end, and digitization is a process, a means to achieve a goal. This book introduces a flexible model that can be applied to current and future organizational challenges, including sustainability and digitization, because the fundamentals are constant. This book is designed to serve two purposes for the readers: first, to present three conceptual foundations for designing and operating organizations (capital, systems, and objects (section 1)); and second, to provide a reference source for

implementing these ideas in your organization (sections 2 and 3). The first section of the book, chapters 1 through 7, sets forth the conceptual foundations. The chapters mix concepts and practical examples to give a new way of thinking about the setting in which one may work many days each year. The second section provides details and associated examples of every one of the thirty-six forms of capital conversion. It also illustrates how the five foundational systems support capital conversion in a variety of ways. Finally, the third section is about measuring capital and systems. The book covers measurement of all types of capital and systems performance and has been written for current and future organizational leaders to change the game and play it more effectively. The book will thus resonate with students of organizational behaviour and leadership strategy, organizational leaders, industry experts, and general readers.
