Bonanza aired on NBC from September 12, 1959, to January 16, 1973, playing to 480,000,000 viewers in over 97 countries. It was the second longest running western series, surpassed only by Gunsmoke, and continues to provide wholesome entertainment to old and new fans via syndication. This book provides an in-depth chronicle of the series and its stars. A history of the show from its inception to the current made-for-television movies is provided, and an episode guide includes a synopsis of each show and lists such details as the main characters of each episode and the actors who portrayed them, the dates they stayed with the show, date and time of original broadcast, writer, director, producer, executive producer, and supporting cast. Also provided are character sketches for each of the major recurring characters, career biographies of Lorne Green, Pernell Roberts, Dan Blocker, and Michael Landon, brief biographical sketches of the supporting cast, a discography of recordings of the Bonanza theme and recordings of the four major stars, and information on Bonanza television movies.

Provides details on over 550 internships and summer jobs.

With the arise of chronic, age and lifestyle-related illnesses, overwhelming stress, toxins and pollution, the society began to value more aspects of personal health than mere physical symptoms – the balance and harmony of mind, spirit and body. The society came to realization that it is not enough to eliminate the symptoms of the disease or even to treat the core of the illness. In most of the cases, the end of hospital treatment of the disease is only the beginning of the actual struggle for the patient. Whatever considered to be an accomplished mission from the point of view of medical protocol is only the beginning of the battle for the patient, which he, often left alone, not necessarily wins. Our experience in research and practice in various parts of Europe and Asia has brought us to conclusion that best definition for the term "biological medicine" is – "common sense medicine". These therapeutic paradigms are developed, employed and practiced by European Wellness Centers (EWC) – a global network of institutions tied up by the concept of European Biological Wellness. Our philosophy does not support mechanistic approach to the patient but encourages holistic care, promotes therapies stimulating healing and regeneration, and puts wellness as a corner stone of the intended outcomes. Another two integral components of Biological Wellness are maximal safety of the therapeutic modalities and its compatibility with conventional medicine. Therapeutic paradigms of European Wellness are built on the platform of classical medicine taught and practiced all over Europe. Years spent on gaining experience and collaborating with most prominent European doctors and precise selection of fine treatment modalities from certain Asian traditional medical systems allowed us to formulate a unique system of Biological Wellness that to our knowledge does not have analogues up to date. The core of European Biological Wellness contains principles of biological medicine, which states that the human body is inherently capable of self-healing, and these abilities depend on anatomical, physiological, mental and spiritual balance. Once any component of this integral system is compromised, the occurring imbalance results in the development of disease. While conventional medicine predominantly identifies and emphasizes on symptoms and certain links of pathogenesis, our way of biological wellness, addresses the underlying causes of disease and acts concurrently with any existing treatment, modulates and balances the entire organism and directs it to effective healing and recovery. The main objective of the book is to offer to the medical community effective holistic diagnosis, detoxification, biological repair and rejuvenation based on the individual needs of the persons and taking into consideration the health status and medical conditions. The book also provides specialized Biological wellness, recovery, and performance enhancement programs for athletes,elderly people, individuals with various untreatable illnesses and congenital disorders with the purpose of improving their general condition and facilitating their primary treatment.

During the past 30 years, researchers have made exciting progress in the science of learning (i.e., how people learn) and the science of instruction (i.e., how to help people learn). This second edition of the Handbook of Research on Learning and Instruction is intended to provide an overview of these research advances. With chapters written by leading researchers from around the world, this volume examines learning and instruction in a variety of learning environments including in classrooms and out of classrooms, and with a variety of learners including K-16 students and adult learners. Contributors to this volume demonstrate how and why educational practice should be guided by research evidence concerning what works in instruction. The Handbook is written at a level that is appropriate for graduate students, researchers, and practitioners interested in an evidence-based approach to learning and instruction. The book is divided into two sections: learning and instruction. The learning section consists of chapters on how people learn in reading, writing, mathematics, science, history, second language, and physical education, as well as how people acquire the knowledge and processes required for critical thinking, studying, self-regulation, and motivation. The instruction section consists of chapters on effective instructional methods—feedback, examples, questioning, tutoring, visualizations, simulations, inquiry, discussion, collaboration, peer modeling, and adaptive instruction. Each chapter in this second edition of the Handbook has been thoroughly revised to integrate recent advances in the field of educational psychology. Two chapters have been added to reflect advances in both helping students develop learning strategies and using technology to individualize instruction. As with the first edition, this updated volume showcases the best research being done on learning and instruction by traversing a broad array of academic domains, learning constructs, and instructional methods.

Use this technology guide to find descriptions of today's most essential global technologies. Clearly structured and simply explained, the book's reference format invites even the casual reader to explore the stimulating innovative ideas it contains.

It is my great pleasure to present the proceedings of the 8th International Conference on Bioinformatics and Biomedical Engineering (ICBBE 2014), held in Suzhou, China, September 20–22, 2014. I would like to take this opportunity to express my sincere thanks to all the authors and participants for their support to our conference. The continuous researches on Bioinformatics and Biomedical Engineering are now of critical significance to the sustainable development of science, education, culture and the society. Especially in modern times, it plays an important role in the interdisciplinary field among the life science, mathematical science, computer science and electronic information science. More and more scholars and practitioners, both within China and abroad, are committed themselves to the cause of this area. With the development of society and technology, a great variety of research results are emerging. Here, ICBBE provides a platform for academic professionals and industry players to exchange the most updated information and achievements in those exciting research areas. On behalf of the organizing committee, I would like to express my gratitude to our sponsors: Wuhan University and Engineering Information Institute. At the same time, we appreciate the contribution from all the paper reviewers and the committee members. It is impossible to organize such a conference without their help. The papers in the proceedings of ICBBE provide details beyond what is possible to be included in an oral presentation and constitute a concise but timely medium for the dissemination of recent research results. I hope that you can find these proceedings interesting, exciting and informative. Thanks again for your support to the ICBBE conference. Prof. Kuo-Chen Chou ICBBE 2014 Committee Chair
