"Hypoxaemia is a major contributor to child deaths that occur worldwide each year; for a child with pneumonia hypoxaemia increases the risk of death by up to 5 times. Despite its importance in virtually all types of acute severe illness, hypoxaemia is often not well recognized or well managed more so in settings where resources are limited. Oxygen therapy remains an inaccessible luxury for a large proportion of severely ill children admitted to hospitals in developing countries. This is particularly true for patients in small district hospitals, where, even if some facility for delivering oxygen is available, supplies are often unreliable and the benefits of treatment may be diminished by poorly maintained, inappropriate equipment or poorly trained staff with inadequate guidelines. Increasing awareness of these problems is likely to have considerable clinical and public health benefits in the care of severely ill children. Health workers should be able to know the clinical signs that suggest the presence of hypoxaemia and have more reliable means of detection of hypoxaemia. This be achieved through more widespread use of pulse oximetry, which is a non-invasive measure of arterial oxygen saturation. At the same time oxygen therapy must be more widely

available; in many remote settings, this can be achieved by use of oxygen concentrators, which can run on regular or alternative sources of power. Having effective systems for the detection and management of hypoxaemia are vital in reducing mortality from pneumonia and other severe acute illnesses. Oxygen therapy is essential to counter hypoxaemia and many a times is the difference between life and death. This manual focuses on the availability and clinical use of oxygen therapy in children in health facilities by providing the practical aspects for health workers, biomedical engineers, and administrators. It addresses the need for appropriate detection of hypoxaemia, use of pulse oximetry, clinical use of oxygen and delivery systems and monitoring of patients on oxygen therapy. In addition, the manual addresses practical use of pulse oximetry, and oxygen concentrators and cylinders in an effort to improve oxygen systems worldwide."--Publisher's description

This Five Year Plan document focuses on Faster, Sustainable and Inclusive Growth. The document is divided into three volumes. Volume I: Faster, More Inclusive and Sustainable Growth provides details of Macroeconomics Framework; Financing the Plan; Sustainable Development; Water, Land Issues; Environment, Forestry and Wildlife; Science and Technology; Innovation, Governance; Regional Equality; Volume II: Economic Sectors provides plans for Agriculture, Industry, Energy,

A compendium of successful case studies of FAMILY PLANNING implementation in India This is the first book on innovations in family planning service delivery in the country which is of particular contemporary relevance, both nationally and globally. It features innovative case studies of family planning from India which have demonstrated impact and are sustainable and scalable. These cases contribute to the approaches of problem solving, enhancing quality family planning care at the grass-roots level and influence future directions of the programme. The book facilitates advocacy, strengthening programme design and enhancing competency as well as orienting the healthcare system to support these efforts. This is an important book for programme planners, policy makers and researchers.

For courses in Pediatric Nursing. A comprehensive survey of family-centered pediatric nursing care Child Health Nursing: Partnering with Children & Families promotes excellence in nursing care for infants, children, and adolescents--in hospitals and in the community. It focuses on the importance of partnering with families to adapt care plans for children based on their age, health status, and

social and cultural influences. The text considers the impact of contemporary care environments on nursing practice, both in health promotion and in the care of children with acute or chronic health conditions. By offering industry best practices and practical applications, the book encourages students to apply evidence-based findings and clinical reasoning to planning superior care. The updated 3rd edition explains how modern nursing practice is affected by reforms to healthcare and its delivery—such as electronic health records, new approaches to chronic and acute condition management, and a focus on prevention. To support safe, effective, and innovative care, this edition draws on the latest recommendations of NANDA International diagnoses, Nursing Intervention Classifications (NIC), Nursing Outcomes Classifications (NOC), and Healthy People 2020. Also available with MyLab Nursing MyLab(tm) Nursing is an online self-study and class preparation program designed to engage students and improve results. This manual provides expert practical guidelines for the management of severely malnourished children. Addressed to doctors and other senior health workers, the manual explains exactly what must be done to save lives, achieve successful management and rehabilitation, prevent relapse, and thus give these children the greatest chance of full recovery. Throughout, the importance of treating severe malnutrition as both a medical and a social disorder is repeatedly emphasized. As successful management does not require sophisticated facilities and equipment or highly qualified personnel, the manual also performs a persuasive function, encouraging health professionals to do all they can to save these children and meet their great need for care and affection. Recommended procedures draw on extensive practical experience as well as several recent therapeutic advances. These include improved solutions of oral rehydration salts for the treatment of dehydration, better understanding of the role of micronutrients in dietary management, and growing evidence that physical and psychological stimulation can help prevent long-term consequences of impaired growth and psychological development. Noting that the physiology of malnourished children is seriously abnormal, the manual gives particular attention to aspects of management -

whether involving the interpretation of symptoms or the use of specific interventions - that differ considerably from standard procedures for well-nourished children. Details range from the reasons why IV infusion easily causes overhydration and heart failure, through a list of treatments that have no value and should never be used, to the simple reminder that underarm temperature is not a reliable guide to body temperature in a malnourished child during rewarming. Further practical guidance is provided in eight appendices, which use numerous tables, charts, sample recording forms, instructions for preparing feeds, and examples of easily constructed toys to help ensure that management is thorough, safe, and in line with the latest knowledge.

World Bank Technical Paper No. 406 (Fisheries Series). In the past six years, the world's fishery sector has reached a turning point with global fish production reaching a plateau of approximately 100 million tons annually. While aquaculture output continued to grow, yields from capture fisheries were uneven and showed increasing signs of stagnation because of widespread overfishing and overcapitalization, ineffective management, deteriorating resource health, declining or flat global harvests, and inefficient economic and trade policies. This paper examines the role of subsidies in fisheries.
