Tripartite Theory of Personality Freud (1923) saw the personality structured into three parts (i.e., tripartite), the id, ego, and superego (also known as the psyche), all developing at different stages in our lives. These are systems, not parts of the brain, or in any way physical. The id is the primitive and instinctive component of personality.

"What makes people behave as they do? Are people ordinarily aware of what they are doing, or are their behaviors the result of hidden, unconscious motives? Are some people naturally good and others basically evil? Or do all people have potential to be either good or evil? Is human conduct largely a product of nature, or is it shaped mostly by environmental influences? Can people freely choose to mold their personality, or are their lives determined by forces beyond their control? Are people best described by their similarities, or is uniqueness the dominant characteristic of humans? What causes some people to develop disordered personalities whereas others seem to grow toward psychological health? These questions have been asked and debated by philosophers, scholars, and religious thinkers for several thousand years; but most of these discussions were based on personal opinions that were colored by political, economic, religious, and social considerations. Then, near the end of the 19th century, some progress was made in humanity's ability to organize, explain, and predict its own actions. The emergence of psychology as the scientific study of human behavior marked the beginning of a more systematic approach to the study of human personality. This edition continues to emphasize the strong and unique features of earlier editions, namely the overviews near the beginning of each chapter, a lively writing style, the thought- provoking concepts of humanity as seen by each theorist, and the structured evaluations of each theory" --

Thoroughly updated to include the latest research available, THEORIES OF PERSONALITY, 10E takes a unique theory by theory approach that carefully guides students through major theories on their way to a comprehensive understanding of personality. Richard Ryckman's student-friendly writing style offers a straightforward presentation of major theories, helping readers more easily distinguish between them. The text begins by providing a framework that defines personality and emphasizes the science of personality--including the interrelation between research and theory. Next it introduces each major theoretical position with an objective overview of the theorist's basic concepts and principles. It concludes by noting the ways in which the different theories stimulate additional research efforts and by presenting five current research trends resulting from the work of these earlier theorists. The result is a text that merges the best of classic and contemporary research to equip students with a solid working knowledge of personality. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Presenting coverage of the major theorists who represent different aspects of the approaches to personality, this text also looks at the study of personality theories, suggesting conclusions that can be drawn from many theorists' work.

Personality Theories: A Global View by leading scholar Eric Shiraev takes a dynamic, integrated, and cross-cultural approach to the study of personality. The text is organized around three general questions: Where did personality theories come from? How did the theorists study facts? How do we apply personality theories now? These questions provide a consistent focus on social context, interdisciplinary science, and applications. Going beyond traditional research from the Western tradition, the book also covers theories and studies rooted in the experiences of other countries and cultures.

[The book] is designed both to explain the major personality theories and to stimulate critical thinking about them. [The author] has pursued four main objectives. To present a clear and concise picture of the major features of each important personality theory ... To focus on significant ideas and themes that structure the content of the different personality theories ... To provide criteria to guide the evaluation of each theory ... To present activities, informed by the tenets of each theory, that will provide growth in critical thinking skills. -Pref.
